About

Description

Implement simple form to present basic information about the purpose of the application and about the installation details.

Functionalities

Form will be opened from tabbed form, on 'About' button action. As it is now, that button is not enabled. It should be changed.

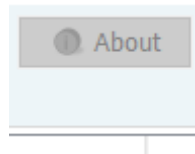

Figure 1 About button on tabbed form

If an user will click 'About' button then, new form will be opened. Form was mocked. The main part of the form is the picture. Picture should be filled horizontally and there should not me any margin between the top bar and the top picture's edge. Below the picture some data about the system and installation should be shown. The following data should be shown:

- System name with copyright sign (big, bolted text);
- System name with year (small, normal text);
- Build number and installation (release date) date (small, normal text);
- Licensed object name, with optional details (small, normal text);
- Subscription information, with optional date (small, normal text).

Below information that is presented on the form should be fetched from data base:

- Build number and installation (release date) date – from com_system_data – build_number and build_date[1];
- Licensed object name, with optional details from – lib_library_data – name and (optional), branch;
- Subscription information, with optional date (small, normal text) – from com_system_data – license_valid_to[2].

This Licensed object for which system data exists. lib_library_data is related to com_system_data by lib_library_system_data.

Interfaces & Integrations

---

[1] build_date at the moment when doc was created was not available at the table and should be added.
[2] license_valid_to at the moment when doc was created was not available at the table and should be added.
